Ecolab's New Out-Back Program Cleans Up Exterior Areas

ST. PAUL, Minn. August 3, 2000: Businesses looking for a simple and effective way to clean, rinse and deodorize their loading dock areas will appreciate Ecolab's new Out-Back program, which consists of two product solutions and two dispensing options.

Oasis 902 is a high foaming, multi-surface degreaser that quickly dissolves tough food soils, grease and oily soils on a variety of surfaces, including dumpsters, block walls and concrete floors. Oasis 904 is a heavy-duty deodorizer that eliminates foul odors and reduces pests found around garbage containers and grease bins. Both concentrated products are non-corrosive when automatically diluted through the closed-delivery dispensing equipment.

The Oasis Caravan dispensing system is a durable, easy-to-maneuver mobile unit that has a product-locking device to securely hold any two Oasis 2.5-gallon containers. It features separate inlet and outlet hoses both 25 feet in length, and a multi-functional applicator tool with four spray settings. Economical and easy-to-install, the Oasis Out-Back wall-mount dispenser offers businesses the flexibility of using Oasis products in either 2.5 containers or 15-gallon drums.

"Maintaining a clean image from the front of the house to the back of the house is a constant challenge for our customers, most of whom do not have an exterior cleaning program in place. That's why they're raving about our Out-Back program; it addresses a previously unmet need," says Leanne Adkins, product line manager, Specialty Kitchen, Ecolab.

Ecolab Inc. is a global leader in cleaning and sanitation products, services and equipment for the foodservice, hospitality and healthcare industries. For more details, call 1-800-35-CLEAN.
