DFIN Announces Venue® MCP Connector, Bringing Secure AI Access to High-Stakes Deal Workflows

2026-10-27

New capability enables organizations to connect directly to live Venue data rooms while preserving governance, permissions, and auditability

NEW YORK, Oct. 27, 2026 /PRNewswire/ -- Donnelley Financial Solutions (NYSE: DFIN), a leading global provider of financial regulatory and compliance solutions and the top SEC filing agent, today announced the launch of the DFIN Venue® MCP Connector, a new capability designed to provide secure transaction information via AI-assisted analysis.

The Venue MCP Connector enables organizations to connect approved AI assistants, including Microsoft Copilot, directly to live Venue virtual data rooms through a secure, hosted Model Context Protocol (MCP) gateway. The solution allows data room owners and sell-side teams to prepare deals, organize and review transaction materials, and analyze information where it already resides, helping accelerate deal preparation, due diligence, document review, and other transaction-related workflows without exporting sensitive data outside the data room environment.

"With the Venue MCP Connector, we are enabling clients to connect external AI applications directly to the Venue Data Room, enabling deal teams to take advantage of AI solutions they already own," said Floyd Strimling, Chief Product Officer at DFIN. "Teams can securely analyze live deal-room data while maintaining the governance, permission fidelity, and oversight that are critical to successful transaction execution. This is a significant step forward in making AI practical, trusted, and enterprise-ready for capital markets and transaction workflows."

Following the launch of AI Translations and AI Summaries, The Venue MCP Connector represents the latest

advancement in DFIN's Active Intelligence™ suite of capabilities, built to deliver secure, enterprise-grade AI capabilities across the capital markets ecosystem, with further enhancements to follow. By combining trusted transaction infrastructure with AI-powered analysis, DFIN continues to help clients improve efficiency, reduce friction, and gain faster access to the information required to make informed decisions.
