DFIN Expands Active Intelligence™ with AI-Powered Document Translation and Document Summaries in Venue®

2026-09-14

New capabilities enable deal teams to accelerate document review and improve cross-border collaboration while keeping sensitive information secure within the data room

NEW YORK, Sept. 14, 2026 /PRNewswire/ -- Donnelley Financial Solutions (NYSE: DFIN), a leading global provider of financial regulatory and compliance solutions and the top SEC filing agent, today announced the expansion of its Active Intelligence™ suite of AI capabilities with the introduction of AI Document Translation and AI Document Summaries within its virtual data room, Venue®. The new capabilities are designed to help deal teams understand critical documents faster, streamline multilingual collaboration and maintain governance throughout the due diligence process.

As transactions involve more stakeholders, more data and greater cross-border collaboration, AI Document Translation and AI Document Summaries enable users to quickly extract insights and overcome language barriers without moving sensitive information outside of the secure Venue environment. The new capabilities further strengthen DFIN's vision for Active Intelligence: embedding practical, workflow-native AI directly into the processes that power high-stakes transactions.

"Today's transactions involve larger volumes of information and increasingly global deal teams," said Floyd Strimling, Chief Product Officer, DFIN. "By making it easier to understand documents, regardless of language, and quickly identify what's most relevant, we're helping our clients streamline due diligence, uncover insights faster and keep deals moving forward. These capabilities reflect our commitment to building AI tools that solve practical

challenges for our clients."

Accelerate Document Understanding Across Languages

The new AI Document Translation capability enables users to understand foreign-language content directly within Venue through secure, permission-aware workflows. Supporting translation across more than 130 languages, this new capability helps deal teams review multilingual content faster by reducing reliance on external translation tools and manual workarounds that can create operational and security risks.

Administrators maintain control through project-level language settings, approval requirements, configurable translation outputs, and comprehensive audit capabilities.

Faster Insights with AI Document Summaries

AI Document Summaries help users quickly assess document relevance without opening and reviewing every file individually. The capability generates concise, AI-powered summaries for supported PDF and Microsoft Office documents, creating a reusable source of document intelligence that can be shared across authorized users. Summary translations further enable deal participants to consume key information in their preferred language, improving collaboration across geographically dispersed and multilingual teams.

Built for Governance and Control

The introduction of AI Document Translation and AI Document Summaries builds on DFIN's continued investment in Active Intelligence, its growing portfolio of AI-powered capabilities designed for capital markets and transaction professionals. By combining advanced AI with the security, governance and workflow controls required for complex transactions, DFIN helps organizations accelerate execution while maintaining confidence in their most sensitive business processes.
